

Pseudocode for Lab - 12 :-

Lab - 12

```
1. {  
  Insert i = 0  
  while i <= 10  
    Print  
    Increase i by 1  
  } end while
```

```
2. { START  
  Ins i = 0  
  while i <= 50  
    If i is  $\div$  by 2  
      Print i  
    Increase i by 1  
  } end while
```

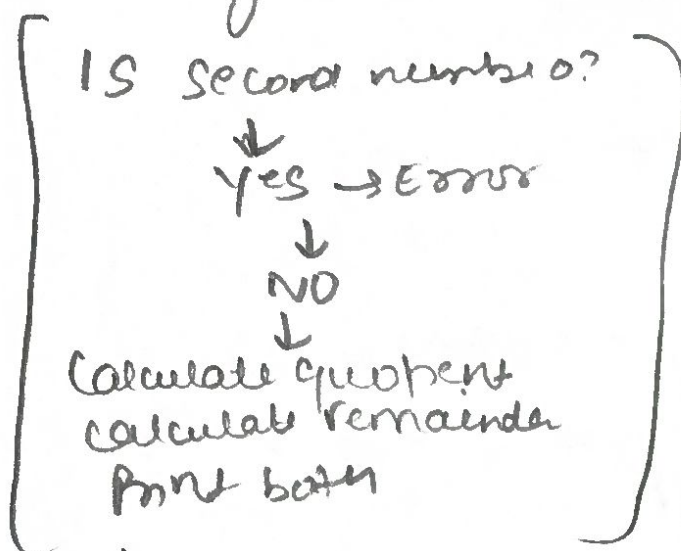

```
3. {  
  START  
  Ins i = 1  
  Until i become greater than 15  
    Result = number  $\times$  i  
    Print  
    Increase i by 1  
  } END  
  STOP
```

```
4. { START  
  READ number in array  
  for  
    Each number in array  
    Print  
  }  
  for each number in array  
    double = number  $\times$  2  
    Print  
  } END
```

Q5. {

Define function divide
(first number, second number)
If second number = 0
 PRINT
 "Division by zero is not allowed"
ELSE
 PRINT Q
 PRINT R
FI
Input first number
Input second number
STOP

logic -

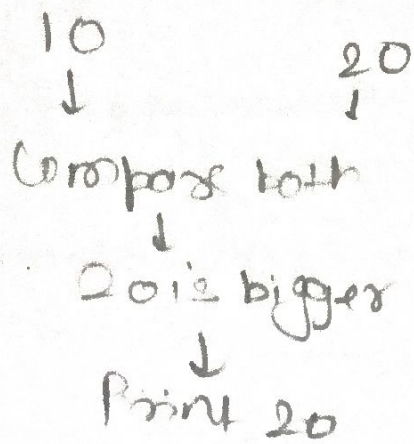

Q6. { START

MAXIMUM (no. 1, no. 2)
If number 1 > number 2
 maximum = number 1
ELSE
 maximum = number 2

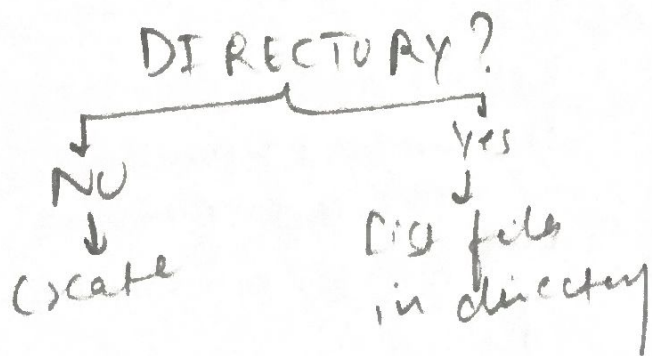

FI
PRINT
} END

Input no. 1
Input no. 2

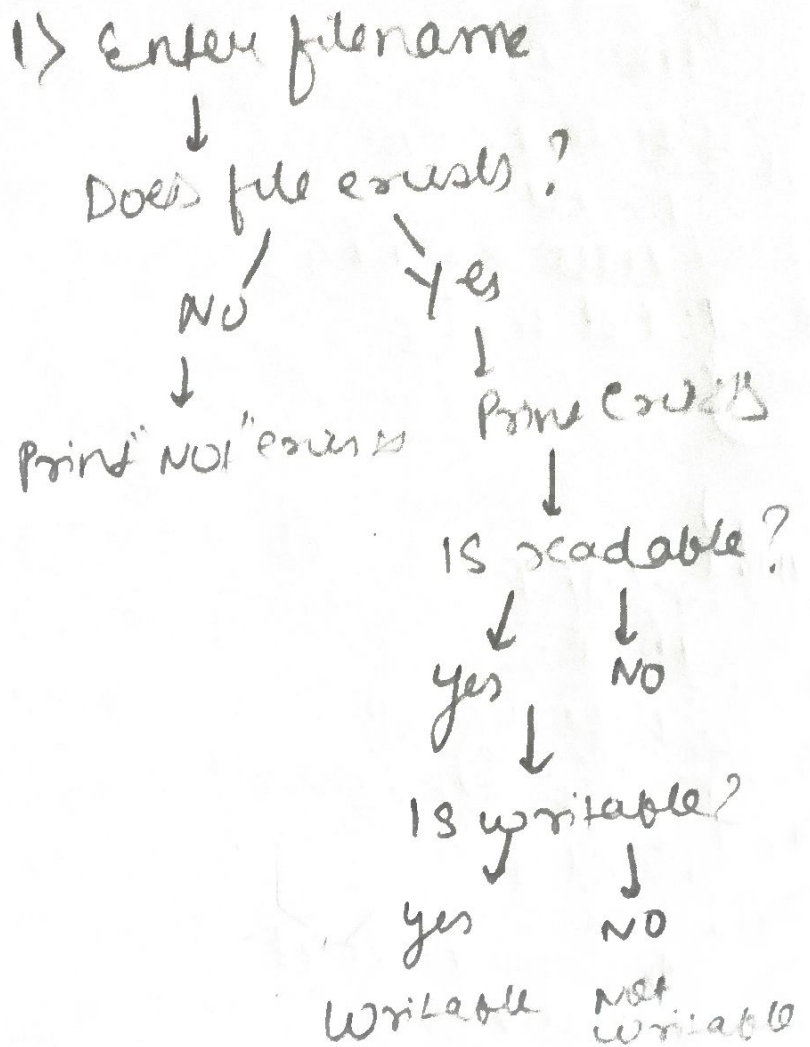

Maximum (number 1, number 2)
STOP

Q7 {
START
IF (Directory exists)
PRINT
ELSE
IF (Directory not exists)
PRINT
FI
END
}
Check - Directory)
Stop
